Certified Woman-Owned GSA Schedule Contractor

Woman of Distinction, 2010
— Philadelphia Business Journal

Green Energy Award
— Penn Future

"By helping clients reduce their energy costs, we are allowing them to focus more of their resources on their core missions."

– Judith Mondre, President & Founder

When large-scale users of electricity, oil, or natural gas want to control their energy costs, they turn to Philadelphia-based Mondre Energy, Inc. (MEI). MEI provides a range of strategies, from energy audits, to procurement, to alternative energy sources, and utility bill reconciliation. The result: hundreds of millions of dollars saved for school districts, municipalities, manufacturers, hospitals, colleges and universities, public transit agencies, and others.

"MEI has the staff, the experience and the skill sets to help our clients meet virtually any challenge they might face, related to energy acquisition, usage and cost," says Judith Mondre, founder and president.

MEI is a leader in energy conservation and cost-control strategies for commercial, industrial, educational, government and nonprofit organizations. For example, MEI was retained by Upper Darby Township in Pennsylvania to develop a strategic energy plan that would lower the municipality's energy use, reduce its carbon footprint, and support green initiatives for job development and improved quality of life for Township residents.

"Not only were we able to identify opportunities for significant cost savings for the Township," Mondre says, "but we have been able to assist the Township in implementing the energy strategies that are greatly reducing its energy costs."

A Proven Record

In the 1990s, Judith Mondre served as the first executive director of Philadelphia's Energy Office, overseeing complex energy management for hundreds of City-owned buildings, as well as one of the country's largest airports. During her tenure, she saved taxpayers $58 million, far exceeding the City's expectations. Confident that she could provide the same benefit to other public- and private-sector entities, she launched her company in 1998.

Today, Mondre's certified woman-owned small business serves clients nationwide, with a team of experts whose backgrounds include mechanical engineering, nuclear engineering, environmental planning and policy, computer science, business administration, finance and law. Many have career experience within the electric, oil, and natural gas industries, providing a unique understanding of all pieces of the energy puzzle.

MEI is one of just three firms chosen nationally as part of the Statewide Evaluation Team for Pennsylvania Act 129. In that capacity, MEI conducts energy audits on thousands of commercial and residential buildings, and evaluates the impact of electric utility rebates for energy-efficient lighting, appliances and other equipment. MEI is also part of the team in a Department of Energy-funded Energy Innovation Hub project at the Philadelphia Navy Yard, work that includes analyzing new technologies to improve building energy efficiency, reduce carbon emissions, and spur job creation in the energy sector.

Judith Mondre has received numerous honors for her work, including an EPA Partner of the Year Award and the Golden Hammer Award. She was named among the Best 50 Women in Business in Pennsylvania, received the Green Energy Award from the environmental organization Penn Future, and was named a Woman of Distinction by the *Philadelphia Business Journal.*

"I love knowing that Mondre Energy is truly making a difference," Mondre says. "By helping clients reduce their energy costs, we are allowing them to focus more of their resources on their core missions."
